

ORIGAMI
HEALTH SUITE

A HOSPITAL'S STORY, TOLD IN ONE PLATFORM

Health Suite

Automation of Hospital in just 6 minutes

Follow one patient from the front desk to discharge — and meet every module that carries their care along the way.

6 MINS

for Automation

99.9%

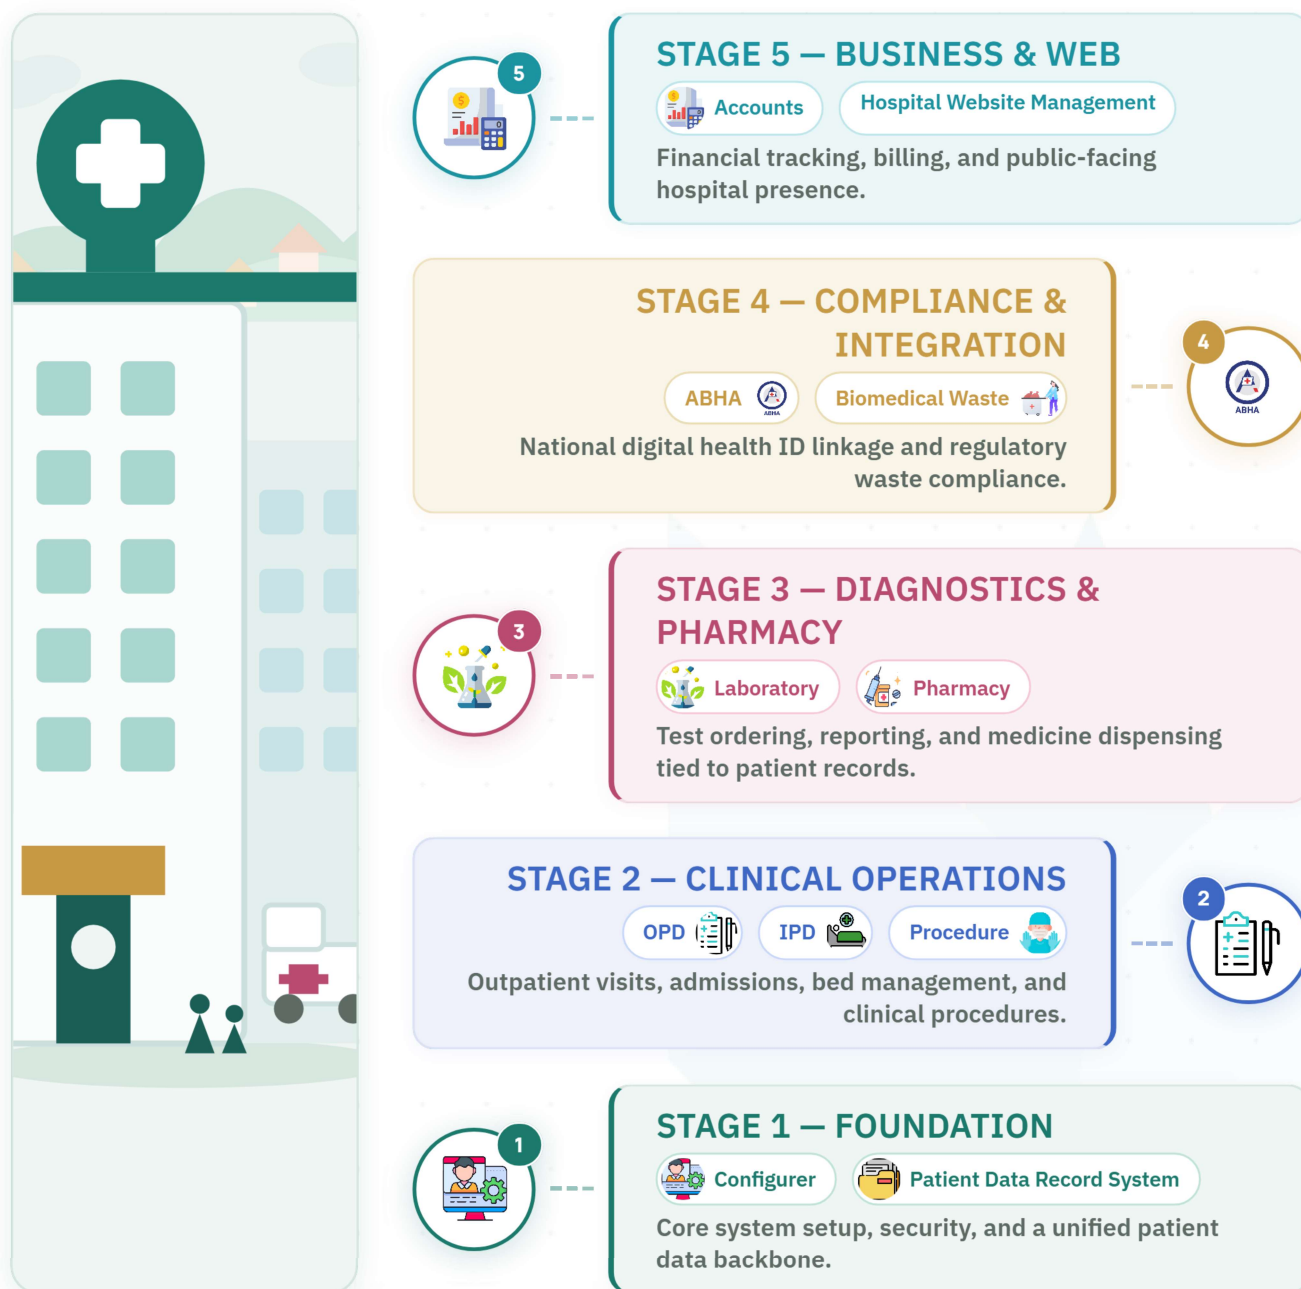

Uptime SLA

Folding innovation into every solution — enterprise software for healthcare.

Built in Stages. Connected by Design.

From foundation to full hospital operations — every module built to work as one system.

▶ 5 STAGES TO GO-LIVE

✓ Every stage, every module — connected through one entry point: Patient Registration.

Every Hospital Has a Story. Most Are a Mess.

A FAMILIAR SCENE

At 9 A.M. the reception is still searching through old files while the lab waits for reports, the pharmacy re-enters the same patient details, and billing depends on manual confirmation of tests and services. By the end of the day, the doctor or administrator may not know how many patients were seen, how many tests were done, how many medicines were sold, or the complete care journey of a patient — because there is no single connected system managing the hospital.

THE PROBLEM

OPD, IPD, lab, pharmacy and billing run on disconnected systems and paper records — slowing decisions, duplicating work, and clouding compliance.

THE NEED

A single, unified platform that consolidates every critical operation — clinical, administrative and financial — in place of stitched-together tools.

PLATFORM BENEFITS

- ✓ Seamless data flow across departments
- ✓ Real-time updates, secure records
- ✓ Centralized patient data (PDRS)
- ✓ Modular — activate what you need
- ✓ Supports BMW & ABHA compliance

50+

Disconnected systems, unified

ONE

Patient ID across every module

100%

Real-time sync, mobile & cloud

0

Duplicate paper trails

✓ THE FOUNDATION

One Registration. Every Module Connected.

Patient Registration is the single entry point for the entire Health Suite — every module pulls from the same patient record instead of asking again.

 **ORIGAMI SAYS** "Register me once — I'll carry your record to every stop on the journey."

✓ THE NEED

Most systems ask every module to re-enter the same patient details. Health Suite starts each workflow from one verified registration — search first, register once.

✓ KEY BENEFITS

- ✓ One Patient ID, reused everywhere
- ✓ Every module shares one verified profile
- ✓ Search by name/mobile — no duplicates
- ✓ Fewer re-entry errors, faster front desk

✓ CAPTURED ONCE

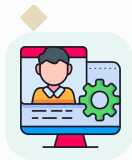

Name, Gender, Age, Mobile, Care Of, Emergency Contact, Blood Group, Address, Email & Hospital Regn. No — one form, one Patient ID, used everywhere.

✓ MOBILE CALLOUT

Search. Register. Connect. — On the go.

The mobile app follows the same flow — search by name/mobile first, then register if not found — keeping one unified identity across every device.

"Accurate data once. Reliable care everywhere."

✓ MODULE 01

Configurer

7 sub-modules

Centralizes configurations, security, roles, users and all module integrations.

A FAMILIAR ISSUE

A new staff member joins and for the first week, either gets access to every system or cannot access anything — because no one is sure how the previous user roles were configured. At the same time, a revised tariff updated at one hospital branch may not reach the other branches. Configurer module gives every user, role, permission, and hospital rule one central place, ensuring the right people have the right access and settings remain consistent across all locations.

✓ THE NEED

Every hospital has different roles, tariffs and workflows. Without central control, permissions drift and configuration changes turn risky.

✓ KEY BENEFITS

- ✓ Single control panel for roles, users, clients, orders
- ✓ Role-based access keeps every module secure
- ✓ Enable/disable modules per institution
- ✓ Full visibility into subscriptions & billing

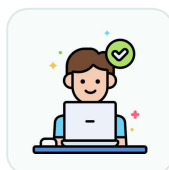

✓ THE JOURNEY

- 1 Define roles and assign module / sub-module permissions
- 2 Onboard institutions, clients and users
- 3 Configure masters — tariffs, departments, workflow rules
- 4 Monitor subscriptions, invoices and system usage

Sub-Modules

Role Mapping

Outpatient Department module enables registration, appointment scheduling, and management of patient visits and services.

✓ INSIDE THE MODULE

OPD

Registration, scheduling & visit management

Consultation Type Master

Categories & charges for standardized billing

Patient Registration

Quick enrollment for outpatient visits

OPD Charges Payment

Automated fee calculation & collection

Doctor Consultation

History, exam, prescription & follow-up

Consultation Reports

Symptoms, diagnosis & advice on record

OPD Reports

Visit, consultation & billing summaries

✓ THE NEED

Outpatient volumes move fast — registration, consultation and billing all need to happen without a queue backing up, and without re-typing the same details three times.

✓ KEY BENEFITS

- ✓ Mobile-number search — no duplicate entry
- ✓ Auto-filled history, vitals & past records
- ✓ Automated charges, cash/online payment
- ✓ Slip & invoice generated instantly

✓ INVOICES AND SLIPS AUTOMATED

Origami Powered Hospital

Patient

A. Sharma, 34 / M

Doctor

Dr. R. Mehta — General Medicine

Date / Time

22 Jul, 10:45 AM

Consultation Fee

₹ 500

IPD & Procedure

Inpatient care and clinical procedures, tracked from admission or booking through to invoicing.

ORIGAMI SAYS 90% of hospitals still reconcile bed charges and procedure bills by hand after discharge.

✎ Origami links admission, treatment and procedure the moment they happen, so the invoice is ready before the patient leaves.

MODULE 03 IPD

9 sub-modules

Admissions, bed allocation, treatment plans and discharge with invoicing.

- ✓ Color-coded beds — occupied and available
- ✓ Room, procedure, lab & medicine charges roll up automatically
- ✓ One-click discharge invoice — nothing to reconcile

● Occupied ● Available

MODULE 04 Procedure

4 sub-modules

Tracks surgeries and clinical procedures with invoice generation.

- ✓ Surgeon, anaesthesiologist & outcome all logged
- ✓ Invoice slip generated automatically

✓ THE JOURNEY

- 1 Search or register the patient
- 2 Pick a room type — only vacant beds shown
- 3 Treatments & services link straight to the bill
- 4 Discharge generates one consolidated invoice

Live Bed Map

See every bed's status at a glance, ward by ward.

Auto-Rollup Billing

Room, procedure charges combine automatically.

One-Tap Discharge

A single consolidated invoice, generated instantly.

✓ From admission to discharge, every charge captured — one invoice, always accurate.

Lab & Pharmacy

Diagnostics and medicine dispensing, tied to the patient record and billed together.

MODULE 05

Lab Revive

11 sub-modules

Modern patient-centric diagnostic lab — test management, reports, outsourced labs.

- ✓ Standardized tests & reference-range parameters
- ✓ Multiple tests, one bill — cost totals automatically
- ✓ Reports lock until every parameter is entered

MODULE 06

Pharmacy

10 sub-modules

Procurement, storage, dispensing, inventory and supplier management.

- ✓ Automated procurement and stock control
- ✓ Faster, accurate dispensing against prescription
- ✓ Real-time inventory visibility & alerts

✓ THE JOURNEY

- 1 Search patient, then select one or more tests
- 2 Total cost calculates — record payment mode & amount
- 3 Lab staff enter parameter-wise results after sampling
- 4 Approve & deliver the report securely

- 1 Procurement & supplier ordering
- 2 Stock receipt & storage
- 3 Dispensing against prescription
- 4 Inventory reconciliation & alerts

Standardized Test Panels

Reference ranges built in for every parameter.

Real-Time Stock Alerts

Low inventory flagged before it becomes a shortage.

Prescription-Linked Dispensing

Every dispense ties straight back to the doctor's order.

Every test, every dose, billed the moment it happens — nothing manual, nothing missed.

✓ MODULE 07

Biomedical Waste

4 sub-modules

Classification, tracking, manifest generation and CPCB compliance reporting.

ORIGAMI SAYS 90% of hospitals still track biomedical waste on paper registers — slow, error-prone and a compliance risk at audit time. Origami automates classification, handover and manifest generation end to end.

✓ THE NEED

Biomedical waste handling carries strict compliance requirements — manual tracking makes CPCB reporting slow and risky.

✓ KEY BENEFITS

- ✓ Structured waste classification
- ✓ Full chain-of-custody tracking
- ✓ Manifest generation on demand

✓ INSIDE THE MODULE

General Details

Daily Waste Generated

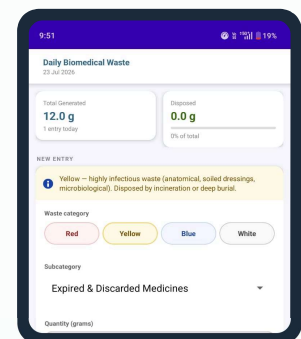

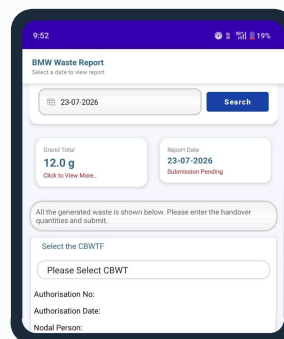

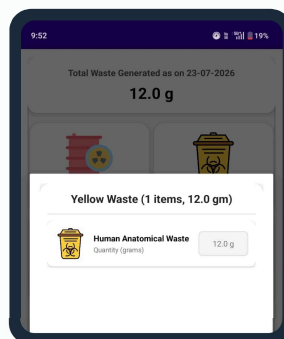

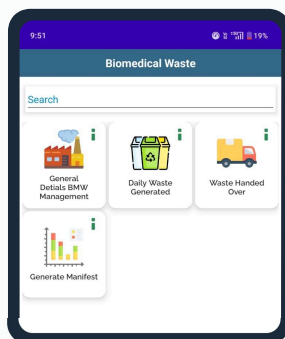

Waste Handed Over

Generate Manifest

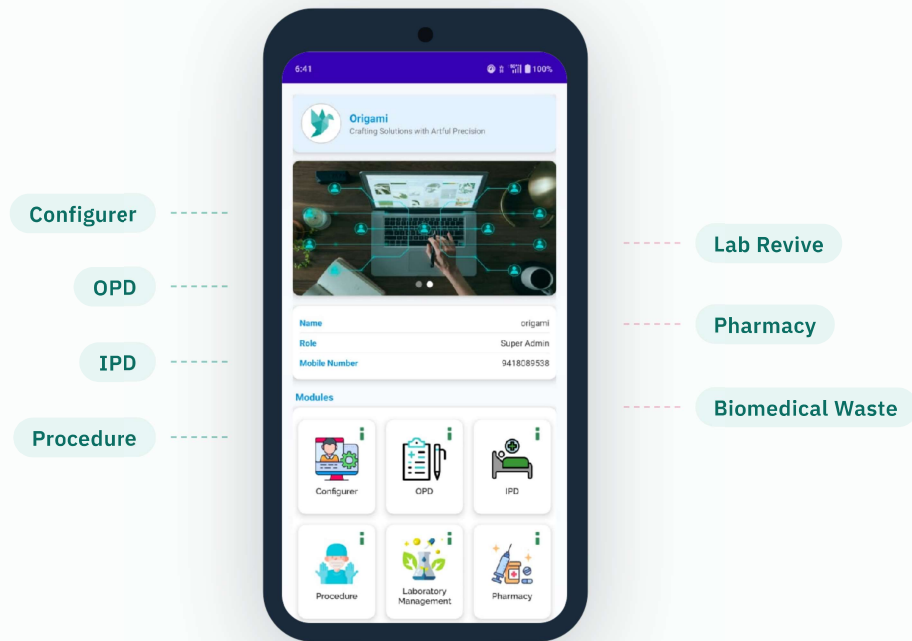

✓ ON THE APP

✓ From paper registers to a paperless, audit-ready process — compliance that runs itself.

Hospital Management In Your Pocket

A full-featured mobile app for doctors, staff and administrators — access patient data, approve reports and monitor IPD beds from anywhere.

✓ THE NEED

Staff and doctors are rarely at a desktop — critical approvals, stock alerts and bed status need to travel with them.

✓ KEY BENEFITS

- ✓ Real-time patient & bed status
- ✓ Lab report access & one-tap approval
- ✓ Biometric login & enterprise security

Push Notifications

Approvals and alerts land the moment they happen.

Offline-Ready Access

Keeps working through patchy hospital connectivity.

Daily Financial Summary

Collections and dues, summarized every evening.

✓ The entire hospital, running from a phone in someone's pocket.

Exclusive Features

Built for hospitals that want the power of a full platform without the complexity that usually comes with it.

Excellent User Interface

Clean, intuitive screens that front desk, clinical and admin staff pick up in minutes — no manual required.

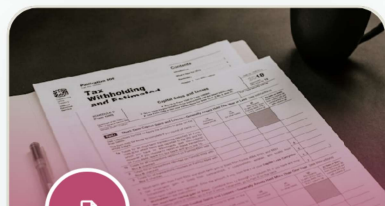

Integrated Website Services

A connected, public-facing hospital website — content and enquiries flow straight into the same platform.

GST Management

Tax calculated and applied automatically across billing, pharmacy and diagnostics — always audit-ready.

Customisable Invoicing

Invoice formats, line items and branding tailored to how each hospital actually bills its patients.

Offline Solutions

On-premise server placement keeps operations running end-to-end, even without a live connection.

Affordable, Modular Pricing

Subscribe only to the modules you need today, and add more as the hospital grows.

One platform, every feature a hospital actually needs — nothing bolted on, nothing missing.

THE NEXT STOP IS YOURS
